

Physics 5620
Electronic Instrumentation for Scientists
Wayne State University - Fall 2012
Lecture: 4:05-5:30 MW, 177 Physics
Lab: 5:40-8:30 MW, 169 Physics

Amplifier circuits, operational amplifiers, oscillators, digital electronics, analog and digital measurements. This is a 5 credit course

Instructor	Giovanni Bonvicini Room: 335 Physics Research Building, Phone: 577-1444, E-mail: ad6204@wayne.edu Office hours: by appointment.		
Prerequisites	Physics 2140/2180		
Textbook	James Diefenderfer and Brian Holton, <i>Principles of Electronic Instrumentation</i> , 3 rd edition (Saunders College Publishing, 1994, ISBN13: 9780030747090) There are a few errors in the main text. A very useful additional reference is the set of lecture notes of Doug Gingrich at the Univ. of Alberta .		
Objectives	At the end of this course you should be familiar with the fundamentals of analog and digital electronics as applied to scientific instrumentation. You will have an appreciation of the work of an electronics technician and of an electrical engineer and be able to converse with them professionally. You will be able to build prototype circuits and test their operation. You will be familiar with a few sensors and with methods of interfacing computers to experiments.		
Laboratory	During the three-hour laboratory period you will construct circuits, make measurements, and compare expected with actual performance of the circuits. You will learn how to use common measuring instruments. You will use computers to collect data and control simple experiments. You will need a bound lab book to keep records of your circuits and measurements. I will collect and grade lab notebooks. This grade will be added to the overall lab grade. A lab report is due one week after the lab. For this course, keep the lab reports simple but concise, with brief explanations of the circuits and measurements, the results of the measurements, and any calculations or graphs that are requested. Neatness counts!		
Homework	Problems will be assigned at approximately one to two week intervals. Problems will be due when the next problem set is assigned. Students may consult with the instructor or each other, but each student must write out their own answers individually.		
Exams	There will be one midterm and one final. Exams are closed book. There will be no make-up exams.		
Grades	Assignments will carry the following weighting:		
	Homework	25%	
	Midterm exam	10%	Monday, October 29 (Tentative)
	Laboratory reports	50%	
	Final Exam	15%	Monday, December 17

Weekly Schedule (*subject to change!*)

Week of	Topic	Chapter (Pages)	Lab	Homework
Aug. 29	Wednesday	Meet to distribute syllabus and outline course.		
Sept. 3	Monday	No class, Labor Day holiday		
Sept. 5	DC circuits, Capacitors, Inductors	1 (1 – 18) 2 (23 – 36)	No Lab	Ch. 1: 1, 4, 7, 8, 18, 23, 25(H). Ch. 2: 1, 3(H) 6, 10. Ch. 3: 6, 7, 13, 15(H), 22.
Sept. 10	AC circuits	3 (43 – 55)	1&2: DC circuits and filter circuits	
Sept. 17-19	Diodes and power supplies	4 (61- 64) 5 (75 – 97)	3: Diode and Power Supply Circuits	Ch. 4: 1, 7, 11, 12(H), 16. and complex number review.
Sept. 24-26	Transistors	8 (155– 179)	4: Transistors	Ch. 5: 3, 5, 7, 8, 9(H).
Oct. 1-3	Transistor circuits	9 (183 – 190)	5: Intro to Multisim	Ch. 8: 7(H),14, 19.
Oct. 8-10	Op-Amps	9 (191– 210)	6: Op-amps	Ch. 9: 5, 6(H), 12.
Oct. 15-17	Op-Amp Filters	10 (215– 219)	7: Theremin	
Oct. 22	Op-Amp Oscillators & Waveform Generators	10 (220- 231)	8: 555 Timer	Ch. 10: 2.
Oct. 24, Wed.	Midterm Review			
Oct. 29	Midterm Exam	Analog Circuits	No Lab	
Oct. 31, Wed.	Intro to Digital Electronics	11		Ch. 11: 2, 5abc, 6a, 7a, 8, 16.
Nov. 5-7	The Gate Zoo	11	9: Logic Gates	
Nov. 12-14	Flip Flops, Latches, Adders	12	10: Flip Flops	Ch 12: 1, 9, 19.
Nov. 19	One Shots, Digital Acquisition, Transducers	14, 7	No Lab	
Nov. 21	Thanksgiving Break – No Classes			
Nov. 26-28	DAC's and ADC's	14	11: Robot-1	

Dec. 3-5	Noise, Boe-Bot Robot	15	12: Robot-2	
Dec. 10, Mon.	Wrap-up, review		No Lab	
Monday, December 17, Cumulative Final Exam
